

Lab 2(BCS551) – DDL Commands & Constraints

Objective: At the end of the assignments, participants will be able to understand basic DDL, Create table with constraints, Alter, Truncate, Drop and Rename

Exercise -1

1. Complete the GRADUATE CANDIDATE table instance chart. Credits is a foreign-key column referencing the requirements table.

Column Name	Key Type	Nulls/Unique	FK Column	Datatype	Length
student_id	PRIMARY KEY	NOT NULL		NUMBER	6
last_name				VARCHAR2	20
first_name				VARCHAR2	20
credits	FOREIGN KEY		Yes	NUMBER	3
graduation_date				DATE	

Ans:

Column Name	Key Type	Nulls/Unique	FK Column	Datatype	Length
student_id	PRIMARY KEY	NOT NULL	No	NUMBER	6
last_name	NONE	NOT NULL	No	VARCHAR2	20
first_name	NONE	NOT NULL	No	VARCHAR2	20
credits	FOREIGN KEY	Nullable (Yes)	Yes	NUMBER	3
graduation_date	NONE	Nullable	No	DATE	N/A

2. Write the syntax to create the grad_candidates table.

Ans: CREATE TABLE grad_candidates (

student_id NUMBER(6) PRIMARY KEY,

last_name VARCHAR2(20) NOT NULL,

first_name VARCHAR2(20) NOT NULL,

credits NUMBER(3),

graduation_date DATE,

CONSTRAINT fk_credits FOREIGN KEY (credits) REFERENCES requirements(credits)

);

3. Confirm creation of the table.

Ans: SELECT table_name

FROM user_tables

WHERE table_name = 'GRAD_CANDIDATES';
